# Artificial intelligence & democratic values 2025 (CAIDP)

Center for AI and Digital Policy provide a comprehensive review of AI policies and practices worldwide protecting fundamental rights, such as democracy.

AI & Democracy

What are four insights on AI & democracy? See **Slide 2** for details.

AI & Partners
Amsterdam - London - Singapore

AI & democracy insights:

Transparency and Accountability Matter
Nations with clear AI governance frameworks foster trust and democratic resilience. Lack of transparency leads to misuse and public distrust.

AI Can Strengthen or Undermine Rights
When regulated properly, AI can enhance freedoms; when misused, it enables mass surveillance, censorship, and discrimination.

Regulatory Gaps Create Risks
Countries with weak AI policies risk deepening inequalities, enabling disinformation, and allowing unchecked corporate and government AI use.

Public Awareness & Advocacy Are Essential
Citizens, policymakers, and businesses must push for ethical AI governance to protect democratic values.

Supporting individuals' fundamental rights:

☑ **Enhancing Access to Justice** – AI-powered legal tools can improve case management, assist public defenders, and reduce legal barriers for marginalized communities.

☑ **Fighting Disinformation** – AI-driven fact-checking and content moderation can help combat misinformation and protect free and fair elections.

☑ **Promoting Inclusion & Fairness** – Ethical AI design can reduce bias in hiring, lending, and public services, ensuring equitable treatment across society.
