EU AI Act Vs Japan AI Act

AI & Partners

Amsterdam - London - Singapore

AI & Partners defends and extends the digital rights of users at risk around the world. By combining direct technical support, comprehensive policy engagement, global advocacy, grassroots professional services, regulatory interventions, and participating in industry groups such as AI Commons, we fight for fundamental rights in the artificial intelligence age.

This report was prepared by Sean Donald John Musch and Michael Charles Borrelli. For more information visit <https://www.ai-and-partners.com/>.

This report is an AI & Partners publication.

Who Are We

AI That You Can Trust

Why Us?

Stay on the right side of history. At AI & Partners, we believe AI should unlock potential—not cause harm. We’ve seen the fear and fallout when teams lose control of AI, but also the trust and innovation that follow when it’s handled responsibly. That’s why we exist: to help you build AI you can trust and stand behind—for the long run.

80%

of AI systems
are unknown

What Do We Do?

We enable safe AI usage—for your organization and your clients. Unknown AI adoption leads to confusion, risk, and reputational damage. We help you take control with tools to identify, monitor, and govern all AI systems—so you're not reacting to AI, you're leading it.

How Do We Do It?

Do you know what AI systems you have? Identify all known and unknown AI systems (algorithms, LLMs, prompts, and models) from all internal and external AI vendors, automated by generating your inventory. Overall, 80% of AI inventory is unknown to our clients.

How do you guarantee ongoing safe AI use? Continuously monitor deployed AI systems for performance drift, anomalies or failures, real-world impacts, and emerging risks (e.g. data poisoning). Any malfunction of an AI system has severe implications for organisations (e.g. inability to assess online misinformation that leads to widespread public mistrust), so monitoring becomes a matter of urgency.

AI Discovery & AI Inventory

Automatically detect all AI systems, including models, algorithms, and prompts, and maintain a live, always-updated register for full visibility and compliance.

Responsible AI

Embed fairness, transparency, and control into every stage of AI use—aligning with the EU AI Act and building ‘Trustworthy-by-Design’.

Model Monitoring

Continuously track your AI models after deployment to detect drift, bias, or failure—so you stay in control and prevent harm before it happens.

Introduction

As artificial intelligence reshapes global economic and governance landscapes, regulatory approaches are rapidly emerging to guide its responsible development and deployment. The European Union's Artificial Intelligence Act (AI Act) sets a legally binding framework for high-risk AI systems, grounded in principles of human oversight, transparency, and risk management. In parallel, Japan's AI Act offers a national vision that emphasizes innovation-driven growth, public trust, and international cooperation, structured through strategic planning and government coordination.

This report presents a comparative mapping of Japan's AI Act against the EU AI Act, designed to help stakeholders understand how Japan's strategic, principle-based model aligns with or diverges from the EU's binding regulatory obligations. It identifies key thematic intersections—such as governance responsibility, public-private coordination, AI literacy, data integrity, ethical deployment, and international alignment—that define both countries' approaches to AI risk and opportunity.

As a result of exploring these cross-jurisdictional connections, the report supports legal advisors, policy architects, developers, and compliance leaders in interpreting how voluntary governance and national strategy can complement regulatory enforcement. It encourages organizations to see Japan's AI Act not only as a national policy, but as a template for how strategic vision, ethical principles, and government leadership can collectively shape trustworthy AI ecosystems.

Whether you are designing AI systems for compliance, scaling innovations across markets, or drafting national or corporate AI strategies, this report provides actionable insights for integrating Japan's governance principles into your alignment with the AI Act—building AI that is future-ready, values-driven, and globally interoperable.

Best regards,

Sean Musch

Founder/CEO

AI & Partners

Key questions being asked about Japan's AI Act

1. What is the primary purpose of the Japanese AI Act?

The Japanese AI Act aims to promote the research, development, and utilization of artificial intelligence-related technologies in a comprehensive and systematic manner. It recognizes AI as foundational to Japan's economic and social progress. By establishing basic principles, developing strategic plans, and creating a national AI headquarters, the Act seeks to ensure transparency, foster innovation, and strengthen international competitiveness. It also ensures alignment with broader science and technology laws, contributing to citizens' welfare and the sound development of the national economy while addressing potential risks such as misuse or rights infringement.

2. How does the Act define “artificial intelligence-related technologies”?

The Act defines “artificial intelligence-related technology” as technology that replicates human cognitive functions—such as reasoning, judgment, and perception—through artificial means. It also includes information processing systems that utilize such technologies to process inputs and produce outputs. The scope extends beyond narrow algorithmic systems, encompassing infrastructures, data processing platforms, and broader systems that contribute to cognitive automation and intelligent decision-making. This definition underscores the integration of AI into both foundational research and practical applications, covering a wide spectrum from machine learning systems to infrastructure enabling smart services and industrial innovation.

3. What are the basic principles guiding AI R&D and use in Japan?

The basic principles stress that AI must drive innovation, boost administrative and industrial efficiency, and strengthen national security. They emphasize responsible development with transparency to avoid risks such as data breaches, copyright infringement, or criminal exploitation. AI policies should be aligned with existing science, technology, and digital society laws. Additionally, the principles mandate international cooperation, interdisciplinary research, and a comprehensive approach—linking basic research, practical deployment, and societal integration. Japan aims to lead global AI efforts while safeguarding public trust, privacy, and safety through well-regulated development and deployment.

4. What are the responsibilities of the national government under the Act?

The national government is responsible for leading the development and implementation of measures that promote AI R&D and utilization, guided by the Act's basic principles. This includes formulating national AI strategies, fostering public-private collaboration, supporting infrastructure and talent development, and establishing guidelines to align with international norms. The government is also expected to integrate AI into its own administrative functions to enhance efficiency and transparency. Through financial, legislative, and strategic support, the government ensures that AI serves national interests, boosts innovation, and respects ethical considerations in its deployment.

5. What role do local governments play in AI development under the Act?

Local governments are required to devise and implement AI-related initiatives tailored to regional characteristics, working in coordination with the national government. They must align their efforts with the Act's basic principles and promote localized applications of AI technologies. This includes supporting local industries in adopting AI, encouraging community education, and integrating AI into public services. The Act acknowledges the importance of decentralized innovation, allowing local authorities to address specific social and economic needs using AI while collaborating with universities, businesses, and the public to maximize the technology's societal benefits.

6. How are R&D institutions expected to contribute under the Act?

R&D institutions, including universities and research corporations, must actively engage in AI research, disseminate findings, and cultivate talent with deep and broad knowledge in AI. They are encouraged to support interdisciplinary and cross-sector research efforts, merging humanities and sciences. These institutions are also expected to align with national and local government strategies and contribute to shared infrastructure and public understanding. The Act emphasizes their role not just in innovation, but in supporting ethical, inclusive, and practical implementations of AI across Japanese society and industry.

7. How does the Act address concerns over AI misuse or ethical risks?

The Act explicitly recognizes potential threats such as criminal misuse, data leaks, and rights violations associated with irresponsible AI use. It mandates transparency in AI R&D and implementation processes, and calls for the development of national guidelines based on international norms to ensure ethical deployment. Government agencies must monitor and analyze misuse cases, propose countermeasures, and disseminate best practices. The law positions trust and safety as core pillars of AI governance, ensuring that technological progress does not compromise public welfare or civil liberties.

8. What educational measures does the Act propose to support AI growth?

The Act mandates promotion of AI-related education at all levels, including public awareness campaigns, academic curriculum development, and lifelong learning initiatives. It emphasizes the importance of cultivating public interest and understanding to ensure inclusive and responsible adoption of AI technologies. Additionally, it seeks to support the development of specialized professionals capable of advancing AI R&D and deployment. By fostering a broad base of AI literacy and expertise, Japan aims to equip its population to responsibly engage with and benefit from the AI-driven future.

9. What is the Artificial Intelligence Strategy Headquarters, and what is its function?

The Artificial Intelligence Strategy Headquarters, housed in the Cabinet, is tasked with overseeing the development and execution of national AI strategies. Headed by the Prime Minister and supported by other ministers, the Headquarters drafts the Basic Plan for Artificial Intelligence, coordinates inter-ministerial AI policies, and ensures alignment with the Act's goals. It may request data and cooperation from public and private entities to inform its strategies. The Headquarters serves as the central authority to unify Japan's efforts in AI development, governance, and international collaboration.

10. How will Japan promote international cooperation in AI under this Act?

International cooperation is a core pillar of the Japanese AI Act. The government is committed to participating in global discussions, establishing and following international norms, and contributing to shared R&D initiatives. Japan aims to lead in global AI governance while aligning its policies with international standards to ensure interoperability, ethical standards, and cross-border innovation. By actively engaging with global partners, Japan positions itself as a responsible and forward-looking leader in shaping the future of AI in a peaceful, secure, and sustainable manner.

Understanding Japan's AI Act

General Provisions

What does it mean?

This section defines the law's purpose, principles, and scope. It outlines the responsibilities of national and local governments, research institutions, businesses, and the general public in promoting the ethical development and use of AI technologies. It emphasizes transparency, safety, interdisciplinary collaboration, and global cooperation, establishing the foundation for a national AI framework.

Why is it needed?

General provisions ensure all stakeholders understand their roles and obligations, reducing risks of misuse and guiding AI development in ways that benefit society and the economy. They provide legal clarity, foster trust, and establish a shared vision to promote innovation without compromising public welfare or national security.

How is it implemented?

Enterprises, governments, and institutions align their operations with the stated principles. This includes creating policies to ensure transparency, addressing risks like bias or data misuse, and cooperating with public initiatives. Government bodies disseminate guidelines, while educational and industry actors foster understanding and responsible adoption of AI technologies across society.

Basic Measures

What does it mean?

This section details concrete governmental actions to support AI, including funding research, building infrastructure, securing talent, establishing ethical guidelines, and promoting international cooperation. It mandates educational outreach and the development of datasets, computing resources, and shared facilities essential to both public and private AI R&D efforts.

Why is it needed?

Basic measures are vital to create an ecosystem where AI can thrive responsibly. Without infrastructure, talent pipelines, or ethics enforcement, AI development can become fragmented or harmful. These measures ensure national competitiveness, mitigate societal risks, and foster innovation that is safe, inclusive, and globally connected.

How is it implemented?

The government allocates resources and partners with academia, industry, and municipalities to execute initiatives. Enterprises engage with public programs, adopt ethical guidelines, and invest in collaborative infrastructure. Regulatory bodies monitor progress and adjust strategies, while educational programs and public awareness campaigns ensure wide understanding of AI impacts and benefits.

Basic Plan for AI

What does it mean?

This section mandates the creation of a national Basic Plan for AI, which serves as Japan's strategic blueprint for AI development and deployment. The plan outlines long-term policies, implementation pathways, and coordination efforts. It is approved by Cabinet decision and regularly updated based on changing needs and technologies.

Why is it needed?

A centralized AI strategy prevents policy fragmentation and ensures coordinated, goal-driven progress across sectors. It allows the government to steer investment, regulation, and research cohesively. This strategic alignment fosters confidence among stakeholders and ensures Japan's AI efforts are effective, competitive, and responsive to global trends and ethical standards.

How is it implemented?

The AI Strategy Headquarters drafts the plan, and the Prime Minister presents it to the Cabinet for approval. Once adopted, ministries, local governments, and private stakeholders integrate it into their operational planning. Updates are made periodically, allowing for adaptation to emerging challenges, technologies, and international developments.

AI Strategy Headquarters

What does it mean?

This section establishes a high-level government body to coordinate all national AI efforts. The AI Strategy Headquarters, led by the Prime Minister, ensures inter-ministerial collaboration, policy coherence, and efficient implementation of AI measures. It holds the authority to gather input and cooperation from public and private stakeholders.

Why is it needed?

A centralized oversight body avoids duplication and misalignment across ministries or sectors. It ensures unified national policy, accelerates decision-making, and allows Japan to respond quickly to AI advancements or crises. It also strengthens coordination between government and industry, which is essential for robust, scalable, and ethical AI deployment.

How is it implemented?

The Headquarters is formed within the Cabinet Office and staffed with ministers and relevant officials. It coordinates policy, tracks implementation, and issues requests for cooperation. Businesses may be asked to submit reports, participate in consultations, or align with national goals. It acts as the nerve center for Japan's AI strategy.

Supplementary Provisions

What does it mean?

These provisions set legal and procedural guidelines for enacting the bill. They outline the effective date, establish timelines for rolling out strategic chapters, and detail amendments to existing laws for consistency. They also mandate ongoing policy reviews to adapt to technological or socio-economic changes in AI.

Why is it needed?

Supplementary provisions provide the legal framework to enforce and adapt the bill. Without clear enactment schedules or mechanisms to revise related laws, implementation could be delayed or inconsistent. This section ensures legal integrity, smooth integration with other legislation, and ongoing relevance in a fast-changing technological landscape.

How is it implemented?

The Cabinet sets the effective date within three months of promulgation and revises affected statutes. Government agencies track implementation progress and conduct regular reviews. Enterprises monitor these changes, ensuring internal compliance, updating policies as needed, and maintaining readiness for future legal or operational adjustments.

Rationale

What does it mean?

This section explains the motivation for the bill: to support Japan's economic and social development through responsible AI advancement. It highlights the need for a coordinated national effort, driven by shared values and strategic planning, and justifies the formation of the AI Strategy Headquarters to lead these initiatives.

Why is it needed?

The rationale provides the underlying logic that supports legislative and policy action. It helps align public and private understanding of the bill's importance, legitimizes the structure of government intervention, and communicates Japan's intent to lead in AI while protecting public welfare and promoting international cooperation.

How is it implemented?

Enterprises and stakeholders integrate the rationale into their strategic outlooks, aligning innovation, compliance, and public communication with national objectives. It informs ESG messaging, investor relations, and participation in government-led initiatives. The government uses this rationale to guide future legislation, diplomatic positioning, and cross-sector AI collaboration.

Understanding Japan's AI Act

Japan's AI Act

EU AI Act

Japan's AI Act		EU AI Act		
Section	Description	Provision(s)	Explanation	Action
General Provisions	Outlines the bill's purpose, defining AI-related technologies and establishing basic principles for promoting their R&D and use. It assigns responsibilities to government entities, research institutions, businesses, and citizens, emphasizing ethical use, transparency, and international cooperation.	3, 1, 4, 96, Recital 22, 50, 70, Recital 12	Purpose of the Bill: - The EU AI Act aims to improve the functioning of the internal market and promote the uptake of human-centric and trustworthy AI, ensuring a high level of protection for health, safety, and fundamental rights. Defining AI-related Technologies: - The Act provides a clear definition of AI systems, focusing on their ability to infer and operate autonomously, which distinguishes them from traditional software. Basic Principles for Promoting R&D and Use: - The Act supports innovation, particularly for SMEs and start-ups, and lays down harmonized rules for the development and use of AI systems. Responsibilities to Government Entities, Research Institutions, Businesses, and Citizens: - The Act assigns roles to various stakeholders, including	Establish internal AI governance aligned with national principles, ensuring transparency, ethical use, and security. Develop compliance protocols reflecting government responsibilities and public interest. Foster interdepartmental AI awareness and training to align with Japan's AI framework and preempt legal or reputational risks.

			providers, deployers, and national competent authorities, to ensure compliance and promote AI literacy. Emphasizing Ethical Use, Transparency, and International Cooperation: - The Act includes transparency obligations for AI systems, ensuring that users are informed when interacting with AI, and promotes international cooperation through guidelines and codes of practice. International Cooperation: - The Act encourages cooperation with third countries and international organizations, provided they offer adequate safeguards for fundamental rights.	
Basic Measures	Details measures the government must take to support AI development, including facility and data infrastructure, guidelines for ethical use, human resource development,	95, 4, 56, ANNEX IV, 10, 13, 17, 5, 66, Recital 68	Facility and Data Infrastructure: The EU AI Act emphasizes the importance of data governance and management practices, particularly for high-risk AI systems, ensuring the quality and	Invest in robust AI infrastructure and collaborate with academia for talent and innovation. Ensure R&D follows ethical guidelines and supports knowledge sharing. Establish internal controls for data usage, and participate in

	education, international cooperation, and public engagement. It emphasizes a lifecycle approach to AI integration from research to societal implementation.		integrity of data used in AI development. It also highlights the need for high-quality data sets for training, validation, and testing. Guidelines for Ethical Use: • The Act encourages the development of codes of conduct to promote ethical AI use, including transparency and accountability. It also outlines prohibited AI practices to ensure ethical standards are maintained. Human Resource Development and Education: • The Act mandates AI literacy, ensuring that providers and deployers of AI systems have the necessary skills and understanding to operate AI systems responsibly. It also supports training and education initiatives to enhance AI expertise. International Cooperation: • The Act promotes international cooperation and	international and government-led AI initiatives to ensure alignment with national and global standards.
--	---	--	--	---

			alignment with global standards to ensure the responsible development and use of AI. It encourages collaboration with international organizations and third countries. Public Engagement: - The Act emphasizes transparency and public awareness, ensuring that AI systems are developed and used in a manner that is understandable and accessible to the public. It also supports public engagement through guidelines and educational initiatives. Lifecycle Approach to AI Integration: - The Act outlines a comprehensive framework for the lifecycle management of AI systems, from development to deployment, including risk management, transparency, and post-market monitoring.	
Basic Plan for AI	Mandates the formulation of a national AI Basic Plan by the government. This plan will set	56, 112, 1, 64, 57, 95, Recital 3, Recital 1, Recital 174, Recital 21	Formulation of a National AI Basic Plan: The EU AI Act does not specifically mandate a	Align corporate AI strategies with Japan's national AI Basic Plan. Participate in industry consultations to shape policy direction. Ensure

	strategic policies, comprehensive actions, and revisions to ensure consistent national direction in promoting AI technology development and deployment.		national AI Basic Plan for each Member State. However, it emphasizes the importance of a coordinated approach at the Union level to ensure consistency and avoid fragmentation in AI regulation and development. Strategic Policies and Comprehensive Actions: • The Act outlines the need for harmonized rules and strategic policies to promote the uptake of human-centric and trustworthy AI, ensuring a high level of protection for health, safety, and fundamental rights. It also supports innovation through measures like AI regulatory sandboxes, which facilitate the development and testing of AI systems. Revisions to Ensure Consistent National Direction: • The Act provides for regular evaluations and reviews to ensure that the regulatory framework	executive oversight of AI initiatives reflects evolving national priorities and includes strategic forecasting for long-term alignment and opportunity identification.
--	--	--	---	---

			remains effective and up-to-date with technological advancements. This includes the possibility of amending the list of high-risk AI systems and prohibited practices to maintain consistency and address emerging challenges. Promoting AI Technology Development and Deployment: The Act supports the development and deployment of AI through various measures, including the establishment of the AI Office to monitor and enforce compliance, and the encouragement of codes of practice to guide ethical AI use.	
AI Strategy Headquarters	Establishes a dedicated AI Strategy Headquarters within the Cabinet to coordinate and implement AI policies. Headed by the Prime Minister, this body ensures inter-agency collaboration and strategic oversight, and is	64, 65, 66	Establishment of a Dedicated AI Strategy Headquarters: The EU AI Act establishes governance structures at both Union and national levels to coordinate AI policies. This includes the AI Office, which is tasked with developing Union expertise and	Designate an internal liaison to monitor and respond to directives or requests from the AI Strategy Headquarters. Build agile reporting structures to contribute data, feedback, or support when requested, and prepare documentation aligning corporate efforts with government-led AI priorities.

	empowered to request cooperation from public and private entities.		capabilities in AI. Additionally, the European Artificial Intelligence Board is established to facilitate coordination among Member States. Coordination and Implementation of AI Policies: • The Act emphasizes the need for consistent and effective application of AI regulations across the Union, facilitated by the Board, which advises and assists the Commission and Member States. This aligns with the strategic oversight role of the AI Strategy Headquarters. Headed by the Prime Minister: • While the EU AI Act does not specify leadership by a Prime Minister, it does establish the AI Office and the Board to ensure high-level coordination and strategic oversight at the Union level. Inter-agency Collaboration and Strategic Oversight:	
--	--	--	---	--

			- The Act supports inter-agency collaboration through the establishment of the Board and its sub-groups, which provide platforms for cooperation among market surveillance authorities and other relevant bodies. Empowered to Request Cooperation from Public and Private Entities: - The Act allows for cooperation with various stakeholders, including public and private entities, to ensure the effective implementation of AI policies. This is facilitated through the Board and the AI Office, which can engage with different actors in the AI ecosystem.	
Supplementary Provisions	Establishes a dedicated AI Strategy Headquarters within the Cabinet to coordinate and implement AI policies. Headed by the Prime Minister, this body ensures inter-agency collaboration and strategic oversight, and is	64, 65, 66	Establishment of a Dedicated AI Strategy Headquarters: The EU AI Act establishes governance structures at both Union and national levels to coordinate AI policies. This includes the AI Office, which is tasked with developing Union expertise and	Continuously monitor regulatory updates and legal amendments stemming from AI legislation. Assign legal and policy teams to regularly assess impacts on operations, ensuring corporate agility in adapting to any Cabinet Order or enforcement change. Develop a compliance roadmap anticipating near-term legal obligations.

	empowered to request cooperation from public and private entities.		capabilities in AI. Additionally, the European Artificial Intelligence Board is established to facilitate coordination among Member States. Calls to Action

Align Corporate AI Governance with National Strategy & EU Risk Obligations

The EU AI Act requires robust internal governance mechanisms, especially for high-risk systems. Japan's AI Act complements this by mandating a centralized national strategy, encouraging organizations to align their internal AI oversight with public policy goals. Together, these frameworks support the development of agile, transparent, and legally grounded governance systems that scale with both innovation and accountability.

Use Japan's AI Literacy Mandates to Meet EU Competency Requirements

The EU AI Act emphasizes that AI providers and deployers must demonstrate sufficient technical and ethical competence. Japan's AI Act supports this by promoting education, public awareness, and talent development at national and local levels. Organizations can leverage Japan's capacity-building initiatives to meet EU expectations for qualified personnel operating and overseeing AI systems.

Apply Japan's Strategic Planning Principles to Guide EU AI Act Readiness

While the EU AI Act provides binding legal obligations, it leaves implementation strategies to Member States and institutions. Japan's AI Act fills this gap with a structured approach via its Basic Plan for AI—offering a strategic model for long-term, cross-sector AI readiness. By adopting similar internal planning frameworks, organizations can ensure sustained compliance and proactive adaptation to evolving EU regulations.

Integrate Public-Private Collaboration into Compliance Frameworks

The EU AI Act encourages stakeholder engagement, transparency, and market dialogue. Japan's AI Act formalizes multi-stakeholder collaboration through national and local initiatives, making it a blueprint for aligning private-sector action with public-sector strategy. Embedding collaborative structures into compliance efforts can enhance legitimacy, share risk insights, and strengthen public trust in AI deployment.

Conclusion

The convergence of Japan's AI Act and the EU Artificial Intelligence Act (AI Act) marks a significant evolution in global AI governance—reflecting a shared commitment to principled, strategic, and risk-aware oversight of artificial intelligence. As AI technologies increasingly shape economies, public services, and international standards, aligning Japan's national strategy with the EU's binding legal framework is essential to fostering trustworthy, secure, and human-centric AI ecosystems.

This mapping report highlights the complementary strengths of both frameworks. Japan's AI Act offers a vision-driven, whole-of-government approach that prioritizes innovation, transparency, and ethical responsibility, while the EU AI Act delivers legal enforceability, sector-specific requirements, and strong institutional oversight. Together, these frameworks offer a robust foundation for coordinated, cross-border AI development—addressing core pillars such as governance structures, risk mitigation, public engagement, and global alignment.

Achieving the full benefits of this convergence depends on how well organizations implement these principles in practice. Institutions must translate Japan's strategic directives—such as coordinated national planning and international cooperation—into operational policies that also meet the AI Act's legal obligations. This demands agile governance, investment in talent and infrastructure, and continuous alignment with evolving global norms.

Despite differing legal mechanisms, early efforts show that synergizing Japan's strategic governance with EU regulatory standards enhances accountability, reduces compliance friction, and positions organizations for leadership in the responsible AI economy. As AI continues to reshape industries and societies, these two frameworks offer a harmonized pathway toward innovation that is both globally competitive and deeply rooted in public trust, ethical safeguards, and legal certainty.
