

Your roadmap to becoming an AI Governance Pro

Build on your professional skills and experience to succeed in one of today's most in-demand careers.

Leverage your strengths to grow in the 4 tracks of AI Governance

Your strengths and diverse experiences have prepared you for the professional opportunity of a career in AI Governance

Strategic communication

You distill complex issues into clear, outcome-oriented messages for a range of audiences.

Stakeholder engagement

You build effective alignment across legal, technology and business teams and with external groups.

Negotiation & influence

You secure commitments and resolve trade-offs with partners and vendors.

Structured problem solving

You apply analytical frameworks to deal with ambiguous and dynamic challenges

Risk and control design

You identify risks, turn insights into proportionate, testable controls and monitor emerging risks

Operating model design

You define roles, responsibilities, decision rights, and escalation paths to structure effective operation.

Program & project delivery

You plan roadmaps, manage schedules and dependencies to deliver quality on time

Change management

You drive the adoption of change through communication, training and role-based support.

Ethical judgement

You integrate societal expectations and social responsibility to inform and make tough calls.

Regulatory interpretation

You translate laws, policies and standards into actionable requirements

Data analysis & measurement

You define metrics, evaluate and manage data quality, and develop insights through data analysis

Technical literacy

You understand technology and confidently translate technical concepts to non-technical audiences.

1

Build the organisational foundations

2

Navigate laws, standards and expectations

3

Create guardrails for safe, secure and lawful AI

4

Operate AI with meaningful human oversight

1 Build your organisational foundations for AI Governance

Foster collaboration

 **Learn** how to bring multiple disciplines together to develop and agree AI principles and commitments

 **Define** the AI principles of your organisation and translate them into measurable, actionable commitments

Create your governance policies

 **Know** the core governance policies needed for oversight, risk management and safe use of AI.

 **Write** your policies, communicate them to your organisation and monitor their adoption and effectiveness.

Structure your team

 **Learn** effective governance structures that can scale. Identify roles and responsibilities, including an AI Governance Lead.

 **Organise** your team's charter and create a responsibility matrix so everyone knows how to make decisions.

Build your governance processes

 **Learn** organisation-wide and lifecycle stage processes and activities for AI governance, along with how they connect.

 **Identify and build** the governance processes that you need across the 7 stages of the AI System lifecycle.

Manage your AI inventory

 **Learn** to map and define the business and technical inventory and supply chain relationships of AI systems.

 **Create** the inventory of AI in your organisation mapping stakeholders, uses, models, data, interfaces and agents

Deliver your business case

 **Know** how to quantify benefits, costs and timing for the implementation of an AI governance program.

 **Write** and present your business case to secure executive sponsorship and the resources to succeed.
