Who Are We

AI That You Can Trust

Why Us?

Stay on the right side of history. At AI & Partners, we believe AI should unlock potential—not cause harm. We’ve seen the fear and fallout when teams lose control of AI, but also the trust and innovation that follow when it’s handled responsibly. That’s why we exist: to help you build AI you can trust and stand behind—for the long run.

80%

of AI systems
are unknown

What Do We Do?

We enable safe AI usage—for your organization and your clients. Unknown AI adoption leads to confusion, risk, and reputational damage. We help you take control with tools to identify, monitor, and govern all AI systems—so you're not reacting to AI, you're leading it.

How Do We Do It?

Do you know what AI systems you have? Identify all known and unknown AI systems (algorithms, LLMs, prompts, and models) from all internal and external AI vendors, automated by generating your inventory. Overall, 80% of AI inventory is unknown to our clients.

How do you guarantee ongoing safe AI use? Continuously monitor deployed AI systems for performance drift, anomalies or failures, real-world impacts, and emerging risks (e.g. data poisoning). Any malfunction of an AI system has severe implications for organisations (e.g. inability to assess online misinformation that leads to widespread public mistrust), so monitoring becomes a matter of urgency.

AI Discovery & AI Inventory

Automatically detect all AI systems, including models, algorithms, and prompts, and maintain a live, always-updated register for full visibility and compliance.

Responsible AI

Embed fairness, transparency, and control into every stage of AI use—aligning with the EU AI Act and building ‘Trustworthy-by-Design’.

Model Monitoring

Continuously track your AI models after deployment to detect drift, bias, or failure—so you stay in control and prevent harm before it happens.

Overview

Artificial Intelligence (AI) is rapidly transforming societies and economies worldwide, and Hungary is navigating its AI governance pathway in alignment with broader EU objectives. Embracing AI's potential while addressing emerging risks, Hungary has adopted a values-driven, innovation-friendly, and EU-aligned approach to AI governance. Rather than developing sweeping national legislation, Hungary is implementing the European Union's AI Act, while supplementing it with domestic frameworks, sectoral initiatives, and strategic tools to ensure responsible, secure, and transparent AI deployment.

At the core of Hungary's AI governance strategy is its alignment with the EU AI Act (Regulation 2024/1689), which entered into force on August 2, 2024. Provisions on prohibited AI practices under the Act began to apply on February 2, 2025, with full implementation across high-risk and general-purpose AI systems anticipated by August 2026. While no standalone AI law exists, Hungary has numerous laws that deal with the use of algorithms or AI, either explicitly or implicitly. These include data protection laws, copyright laws, the legislative framework on national data assets, and e-administration frameworks, which contribute to transparency obligations and introduce mechanisms for oversight of AI systems. These measures are reinforced by the obligation to perform data protection and algorithmic impact assessments, particularly for AI systems that impact citizens' rights. These tools are complemented by targeted sectoral efforts—ranging from specialized AI Testing and Experimentation Facilities (TEFs) to the AI Factory Pharos and the DAEDALUS supercomputer, which foster ethical data usage and secure AI development.

Hungary's institutional AI governance structure is coordinated across multiple agencies. The Ministry of Innovation and Technology has been instrumental in shaping the national AI strategy and overseeing its implementation. The National Authority for Data Protection and Freedom of Information (NAIH) plays a crucial role in enforcing data protection aspects relevant to AI.

Other authorities overseeing related fields, such as those responsible for copyright and e-administration, also contribute to the oversight of AI systems within their respective purviews. Dedicated bodies and initiatives, such as the Hungarian AI Coalition and the National Lab for AI, monitor and implement the AI strategy.

Hungary's AI governance is also shaped by its commitment to international standards. Hungary's "AI Strategy Hungary 2020-2030" sets out principles for ethical AI development and deployment, aligning with broader European values. The strategy aligns with OECD AI Principles. Through its active participation in EU initiatives and standardization platforms, such as OECD ONE AI, the European Commission, European Digital Innovation Hubs (EDIHs), and the Digital Europe Program, Hungary advances a coordinated vision rooted in democratic values, human rights, and technological sovereignty.

As outlined in its national AI strategy, Hungary envisions AI as a critical enabler of digital transformation, sustainable development, and global competitiveness. Strategic priorities include building compute capacity, promoting SME participation through supportive ecosystems, and expanding AI education through training programs and skill development initiatives. Tools such as the ethical principles outlined in the AI Strategy 2020-2030, guidance from the NAIH on data protection in AI context, and research by national institutions foster ethical and human-centric AI design from the outset.

Through a combination of EU harmonization, national infrastructure development, and global engagement, Hungary is advancing a governance model that balances technological leadership with democratic accountability. This approach positions Hungary as an active participant in the evolving AI governance landscape within the EU context.

Specific AI Governance or Law

Hungary has no standalone AI law but aligns with the EU AI Act, effective August 2024, with prohibited practices enforceable from February 2025 and full implementation by August 2026. Existing laws on data protection, copyright, national data assets, and e-administration address AI use, supporting transparency and oversight in algorithmic systems.

Specific AI Governance in Hungary

Hungary has no legislation that is specifically dedicated to AI, but it has taken significant steps to domestically align with the EU AI Act (Regulation 2024/1689), which entered into force on August 2, 2024. Provisions on prohibited AI practices under the Act began to apply on February 2, 2025. Full implementation across high-risk and general-purpose AI systems is anticipated by August 2026. While no standalone AI law exists, Hungary has numerous laws which deal with the use of algorithms or AI (explicitly or implicitly). These include data protection laws, which have a significant impact on AI operations due to their technology-neutral nature and AI's reliance on data. Copyright laws also apply, covering rights that parties can claim on components of AI (e.g., databases used to train AI models) and elements generated with the help of AI (e.g., software, creations). The legislative framework on national data assets regulates the use of public data, including in relation to the potential use of AI. Furthermore, the legislative framework on e-administration contains explicit rules on electronic administration tasks and activities conducted with automated means, which often involve AI. These measures contribute to transparency obligations and introduce mechanisms for oversight of AI systems.

AI Ethics Guidelines and Sectoral Governance Tools

While Hungary lacks a unified national ethics framework for AI, several strategic documents and institutions play guiding roles. The country's "AI Strategy Hungary 2020-2030" sets out principles for ethical AI development and deployment, aligning with broader European values. It focuses on conditions for AI development, ethical principles, data governance, and national pilot applications. The Data Protection Authority (NAIH) has provided guidance on data protection in the context of AI, implicitly addressing ethical implications related to privacy and data handling. National research institutions and universities are engaged in AI research, which contributes to understanding AI's ethical dimensions and supporting responsible AI development within specific sectors.

Proposed AI Regulatory Authority and Future Outlook

The Irish Government has approved a distributed model of implementation for the AI Act, with an initial list of eight public bodies designated as competent authorities. While a lead regulator is yet to be designated, this approach aims for coordinated oversight. The National AI Strategy is a whole-of-Government strategy, requiring coordinated action from various Government Departments, agencies, and bodies. The Government also plans to establish a GovTech Delivery Board, which will lead the digital transformation of the public service and consider AI adoption as part of its work. To drive public trust in AI, the Government will appoint an AI ambassador to promote awareness and emphasize an ethical approach. Furthermore, a Top Team on Standards for AI, led by the National Standards Authority of Ireland (NSAI), was established in 2020 to develop a standards and assurance roadmap for AI. Looking forward, Ireland's AI governance trajectory will be shaped by its integration into the broader EU AI framework and domestic legislative evolution. National discussions will continue on expanding protections around workplace AI use and data ethics, while industry and research sectors anticipate greater clarity on AI liability, copyright, and generative model governance. Ireland's commitment to democratic values, public transparency, and European coordination positions it as a proactive and responsible actor in the EU context.

Discussion: Hungary's National AI Strategy

Hungary's AI governance approach is grounded in a values-based, human-centric framework that emphasizes responsible, secure, and public good-oriented development of AI. Anchored in the principles of trust, transparency, and European values, the strategy promotes proportionate regulation and international cooperation. Rather than relying solely on prescriptive legislation, Hungary fosters AI through structured ecosystems, research excellence, and cross-sector collaboration—supported by initiatives like the Hungarian AI Coalition and the National Lab for AI.

Transform. Sustainable AI democratisation

Empower. Excellence and democratisation of AI knowledge & infrastructure

Enable. Democratic ethos in AI-by-Design

Innovate. Implementing AI democratisation

Analysis

Hungary's National AI Strategy 2020-2030 reflects a comprehensive commitment to embedding AI within a framework of ethical, legal, and societal considerations. The strategy's objectives include supporting and boosting the AI value chain, strengthening the foundation pillars of the Hungarian AI ecosystem, providing policy actions for specific sectors, and presenting transformative programs with long-term goals such as tackling the COVID-19 crisis and climate change. It aligns with the OECD AI Principles. While the European Union's AI Act advances binding regulations, Hungary complements this with a governance approach that integrates sector-specific innovation with principled oversight, particularly through its existing legal framework and strategic initiatives.

A distinguishing feature of Hungary's approach is its emphasis on integration within the European and international context. As an EU Member State, Hungary will be directly subject to the provisions of the EU AI Act. Regulatory efforts aim to ensure both innovation and accountability, with existing laws covering data protection and copyright implicitly influencing AI development and deployment. Hungary is actively involved in international cooperation for trustworthy AI through its participation in OECD ONE AI, the European Commission, European Digital Innovation Hubs (EDIHs), and the Digital Europe Program. Hungary's AI governance also supports adaptive implementation mechanisms. The Hungarian AI Coalition, described as a "stakeholder consultation forum with expert groups," promotes experimental use, iterative learning, and feedback-informed policymaking, allowing for evidence-based adjustments to governance frameworks in response to emerging challenges. The establishment of an Innovation Centre for Artificial Intelligence and a National Lab for AI further supports applied research and development.

Another hallmark of Hungary's strategy is its systemic focus on embedding AI across sectors through specialized infrastructure and ethical guidelines. Distributed responsibility is promoted via shared participation by government, industry, academia, and civil society, exemplified by the Hungarian AI Coalition. The strategy highlights that AI development and deployment should consider "direct benefits to citizens" and address societal challenges. Hungary further prioritizes capacity-building. While specific initiatives for AI literacy are not detailed, the strategy's objectives to "strengthen the foundation pillars of the Hungarian AI ecosystem" and "public research capabilities, skills" imply a focus on developing a future-ready workforce. The strategy places a strong emphasis on addressing environmental challenges through AI, such as climate-driven agriculture and energy networks focused on renewable sources.

Hungary's Approach to AI Regulation and Governance

Hungary has adopted a dual-track approach to AI governance, combining alignment with the EU AI Act with the development of a dedicated national AI framework. While it currently lacks binding national legislation directly regulating AI, Hungary is advancing its policy landscape through strategic initiatives, sectoral guidance, and institutional engagement that emphasizes responsible innovation and fundamental rights.

1. Regulatory and Strategic Frameworks

Hungary's AI governance is embedded in the broader EU legislative context, with the EU AI Act set to become the country's central regulatory instrument. As of February 11, 2025, Hungary has no legislation specifically dedicated to AI. However, numerous existing laws implicitly or explicitly deal with the use of algorithms or AI. These include data protection laws (which are technology-neutral), copyright laws (covering components of AI and AI-generated elements), the legislative framework on national data assets (regulating the use of public data in relation to AI), and e-administration frameworks (containing explicit rules on electronic administration tasks and activities conducted with algorithms).

2. Institutional Support and Strategic Missions

AI policy in Hungary is coordinated across multiple institutions, though the specific designation of an independent national AI regulator is not detailed in the provided information. However, the influence of the EU AI Act implies that Hungary will need to establish or designate competent authorities for its implementation and supervision. Strategically, Hungary's approach to AI is shaped by its existing legal frameworks governing data protection, copyright, data economy, and e-administration, indicating a focus on integrating AI within established legal and administrative norms.

3. Standards Development and Global Engagement

Hungary is a committed participant in the EU's harmonization process and contributes to shaping AI standards at the European level through its obligations under the EU AI Act. While the provided text does not detail Hungary's specific role as a lead actor in global standard-setting, its adherence to EU legislation inherently aligns it with broader discussions and principles related to AI ethics, data privacy, and algorithmic transparency within the EU and global digital rights forums.

4. Sectoral and Extended Regulatory Approaches

Hungary's sectoral governance leverages existing legal frameworks to shape AI deployment. These include:

- Data protection laws: These laws have a significant impact on AI operations, as AI is by definition based on data.
- Copyright laws: These govern the rights that parties can claim on the components of AI (e.g., databases or raw materials used to train AI models) and elements generated with the help of AI (e.g., software, creations).
- Data economy legislative framework: This regulates the use of public data, including in relation to the potential use of AI.
- E-administration legislative framework: This contains explicit rules on electronic administration tasks and activities conducted with algorithms.

5. Fostering Innovation and Indigenous Development

The provided content does not explicitly detail specific government-backed initiatives or programs aimed at fostering AI innovation, venture capital, or deep-tech infrastructure development in Hungary. However, the implicit influence of the EU AI Act and the general push for digital transformation within the EU suggest that Hungary, like other member states, would be working towards supporting AI innovation in academia and among SMEs, aligning with broader European objectives for economic competitiveness.

6. AI in Public Sector Transformation

Public administration is an area where Hungary's existing legal frameworks, specifically the e-administration legislative framework, contain explicit rules on electronic administration tasks and activities conducted with algorithms. This indicates a focus on integrating AI into public services to enhance efficiency and potentially modernize administrative processes, with oversight from existing authorities responsible for e-administration.

7. AI Skills, Education and Inclusion

The provided content does not specifically detail Hungary's initiatives related to AI capacity-building, talent development, workforce training, or upskilling across public and private sectors. However, given the overarching EU AI Act and the broader European push for digital transformation, it is implied that Hungary would be engaged in efforts to address gaps in AI literacy and prepare its workforce for AI-integrated workplaces.

8. Infrastructure, Compute and Data Foundations

Hungary's digital infrastructure supporting AI deployment is influenced by its data protection laws and the legislative framework on national data assets, which regulates the use of public data. While specific details on broadband, 5G expansion, cloud services, and data interoperability as policy priorities are not provided, the general nature of AI operation being based on data suggests that these areas would be crucial for AI scale. Hungary's alignment with EU provisions for data governance and data protection implies a commitment to scaling AI responsibly and with respect for fundamental rights.

Hungary's Approach to Fostering AI Innovation

Hungary's AI Strategy 2020-2030, outlined by András Hlács, Digital Counsellor at the Permanent Delegation of Hungary to OECD, emphasizes a comprehensive approach to responsibly deploy and govern AI, aligning with OECD AI Principles. The strategy focuses on strengthening the Hungarian AI ecosystem, fostering innovation, and addressing societal and environmental challenges, while ensuring international cooperation.

Unlocking Economic Value through Strategic AI Deployment

Hungary is harnessing AI to enhance productivity and innovation across sectors, with a strategic vision to support and boost the AI value chain and provide policy actions for specific sectors. While not explicitly termed an "AI Innovation Competition," the strategy includes funded initiatives like grants for business R&D and innovation, a dedicated R&D procurement fund, and a corporate AI experimental and support fund to drive economic value. The focus is on the widespread adoption of AI applications and business innovation.

Driving Innovation via Research Clusters and Application Hubs

Hungary is driving innovation through several key initiatives, including the establishment of an AI Lab and an AI EDIH-network (European Digital Innovation Hubs). The strategy emphasizes public research capabilities and skills, and the development of AI through technological focus areas such as machine detection and recognition, intelligent manufacturing, NLP technology, reliable AI, anonymisation, and the mathematical foundation of AI. The Innovation Centre for Artificial Intelligence and the National Lab for AI are also part of the implementation framework.

Enabling Trusted and Responsible Data Use

The Hungarian AI strategy emphasizes enabling trusted and responsible data use by triggering the data economy and promoting and supporting the secondary usage of datasets to bolster the AI research environment. This is part of strengthening the foundational pillars of the Hungarian AI ecosystem and includes a focus on data wallets and personalized data services as transformative programs. Regulatory and ethical frameworks are also a founding pillar to ensure responsible data handling.

Scaling AI in Public Administration

Hungary aims to scale AI across various sectors, including public administration. The strategy provides policy actions for specific sectors and includes "Automated administrative procedure in Hungarian" as a transformative program. This focus on public administration is part of increasing sectoral efficiency through AI.

Advancing Compute and Research Infrastructure

Hungary recognizes the importance of advancing compute and research infrastructure as a founding pillar of its AI strategy. This includes infrastructure development and promoting investment in AI R&D. The establishment of the National Data Asset Agency and the National Lab for AI further contributes to strengthening the research infrastructure.

Empowering SMEs and Startups

The Hungarian AI strategy aims to empower SMEs and startups by supporting AI uptake and application. This is facilitated through various funded initiatives such as grants for business R&D and innovation, and a corporate AI experimental and support fund. The strategy also focuses on AI application adaptation within the AI value chain.

Developing a Future-Ready Workforce

Hungary places a strong emphasis on developing a future-ready workforce by focusing on education and competence development. "Preparation of Society and Competence Development" is a founding pillar of the strategy. Transformative programs like "AI-supported personal competence development" and initiatives such as "AI Challenge - education, awareness campaigns" are in place to address AI talent needs and build human capacity.

Aligning AI with Sustainability Goals

Hungary aligns AI with sustainability goals through transformative programs such as "Energy Network optimization focusing on renewable energy sources" and "Climate-driven agriculture". Addressing environmental challenges is also a key priority of the strategy, demonstrating the commitment to leveraging AI for a more sustainable future.

Building Public Trust and Ethical AI

Hungary is committed to building public trust and ensuring ethical AI by establishing regulatory and ethical frameworks as a founding pillar of its strategy. The strategy also includes a focus on "Reliable AI" as a technological priority. Public awareness campaigns and the involvement of the Hungarian AI Coalition, a stakeholder consultation forum with expert groups, contribute to fostering trust and ensuring ethical considerations in AI development and deployment.

Shaping Global AI Governance and Standards

Hungary is a proactive player in shaping global AI governance and standards, with its AI strategy explicitly stating alignment with OECD AI Principles. The strategy emphasizes international cooperation on Science, Technology & Innovation, and actively participates in initiatives like OECD ONE AI and collaborates with the European Commission on programs such as European Digital Innovation Hubs (EDIHs) and the Digital Europe Program. András Hlács, as Co-Chair of the OECD Network of Experts on AI working group on policies for AI, further highlights Hungary's role in global AI discussions.

Figure 1: Hungary's National AI Strategy

Digital Decade 2025: Country Report

Hungary is progressing in line with its national AI development plan. However, despite notable advancements over the past year, the overall adoption of AI technologies among Hungarian businesses—particularly small and medium-sized enterprises (SMEs)—remains relatively low and challenging. Surveys indicate that a key obstacle for micro and small companies is the insufficient level of digital skills required to implement AI effectively.

Surveys indicate that a key obstacle for micro and small companies is the insufficient level of digital skills required to implement AI effectively.

In response, the Hungarian government is in the process of revising its national AI Strategy, initially introduced in 2020. The updated version is expected to be released by the second quarter of 2025.

Support for

Government AI Readiness by Oxford Insights

'Eastern Europe ranks 4th in this year's Government AI Readiness Index, with an average score of 57.88—over 10 points above the global average (47.59). Estonia (72.62) leads the region and is the only Eastern European country to feature in the global top 25. The region performs above the global average across all three pillars. Its strongest performance is in the Data & Infrastructure pillar (72.10), making it the third-best performing region globally in this area. Eastern Europe also shows solid results in the Government pillar (62.52), where it again ranks third worldwide. However, the Technology Sector remains a challenge, with a regional score of 39.03—more than 20 points behind the other two pillars—and ranking fifth globally, falling narrowly behind the Middle East and North Africa (39.34). This reflects the need for further investment in technological capacity and innovation to unlock the region's full AI readiness potential. Eastern Europe's strong governance frameworks and robust data infrastructure continue to drive its progress, positioning it as a leader among emerging regions in AI readiness.

Government

Hungary scores 74.09 in the Government pillar, reflecting its structured approach to AI governance. Hungary's National AI Strategy 2020-2030 was announced in a Governmental Decree on September 8, 2020. The strategy includes a coordination and governance mechanism through the AI Coalition and the Ministry for Innovation and Technology (ITM). The strategy aligns with OECD AI Principles, emphasizing policy actions for specific sectors and strengthening the foundation pillars of the Hungarian AI ecosystem. The Hungarian AI Coalition serves as a stakeholder consultation forum with expert groups.

Technology Sector

Hungary's score of 41.81 in the Technology pillar indicates a developing AI innovation environment. The National AI Strategy focuses on boosting the AI value chain and strengthening public research capabilities and skills. Key technological focuses include Machine Detection and Recognition, Intelligent manufacturing, NLP technology, Reliable AI, Anonymisation, and the Mathematical foundation of AI. Funded initiatives like grants for business R&D and innovation, a dedicated R&D procurement fund, and a corporate AI experimental and support fund aim to foster innovation and AI uptake. The strategy also highlights the need for AI application adaptation and encourages public and private investment in R&D.

Data & infrastructure Sector

With a score of 75.00, Hungary performs strongly in the Data & Infrastructure pillar. The strategy emphasizes triggering the data economy and promoting and supporting the secondary usage of datasets for AI research. Infrastructure development is identified as a founding pillar. The establishment of the National Data Asset Agency is a key component of the implementation phase, supporting secure and ethical data access. The strategy also includes transformative programs such as "Data wallet and personalized data services.

With a total score of 63.63, Hungary is a strong performer in the Government AI Readiness Index. Its high governance and infrastructure scores reflect robust institutional engagement and solid digital foundations. The strategy, prepared between 2018 and 2020, aims to implement AI from 2020 to 2030, with ongoing monitoring, follow-up, and review processes. Hungary's comprehensive approach, combining strategic vision with policy actions and alignment with international principles, positions it as a capable actor in shaping the future of AI in Europe.

Conclusion

Hungary's artificial intelligence ecosystem is entering a critical juncture—poised to translate substantial public investment, research leadership, and regulatory momentum into broad-based, sustainable impact. With a cohesive national vision embedded in its "AI Strategy Hungary 2020-2030" and reinforced through its commitment to EU objectives, Hungary has laid a strong foundation for AI innovation that reflects its values of democratic accountability, technological sovereignty, and human-centricity. Initiatives like the establishment of an AI Lab and an AI EDIH-network and sectoral deployments in manufacturing, healthcare, agriculture, and public administration demonstrate Hungary's commitment to leveraging AI for economic competitiveness and societal benefit.

Yet, persistent challenges remain. As outlined in recent ecosystem assessments and readiness indicators, Hungary must accelerate the transfer of AI research into scalable, commercial applications, particularly among SMEs. Enhancing the usability of AI infrastructure, including compute resources and access to high-quality data, will be critical for enabling experimentation and reducing entry barriers. While the strategy emphasizes "preparation of society and competence development" and "AI-supported personal competence development", talent shortages—especially in applied AI engineering and cross-disciplinary roles—further underscore the need to align educational pipelines and vocational training with market demand.

While Hungary's governance model benefits from EU harmonization and strong regulatory foresight through the EU AI Act, domestic implementation must continue to ensure clarity, administrative simplicity, and effective enforcement. The "AI Strategy Hungary 2020-2030" was announced in a Governmental Decree on September 8, 2020, and the National Authority for Data Protection and Freedom of Information (NAIH) plays a crucial role in enforcing data protection aspects relevant to AI. The strategy's focus on "regulatory and ethical frameworks" and "reliable AI" will be pivotal in shaping the operational landscape. Equally important will be the scaling of regulatory sandboxes and the institutionalization of participatory mechanisms—such as those supported by the Hungarian AI Coalition, a stakeholder consultation forum with expert groups—to maintain public trust in high-impact AI deployments.

To secure long-term leadership, Hungary must double down on inclusive innovation strategies that bridge regional divides, empower SMEs and startups, and foster collaboration between academia, startups, and industry. Strategic international engagement—through its participation in OECD ONE AI, the European Commission, European Digital Innovation Hubs (EDIHs), and the Digital Europe Program—positions Hungary to influence global AI norms and governance frameworks, particularly around safety, ethics, and sustainability. If Hungary continues to act with strategic coherence, technical ambition, and a strong societal mandate, it can not only lead the European AI agenda—but also define the global trajectory for responsible, human-aligned AI systems.

The strategic groundwork is robust—the moment to accelerate execution is now.

Appendix A: Expert Vignettes

Peter Sukosd

Auchan Retail Hungary

“

Could you please amend my quote accordingly:

The successful development and deployment of AI-based models depend on several key factors: (1) large and diverse datasets, (2) adequate computing power, (3) highly skilled and specialized workforce, and (4) sufficient financial support. Moreover, access to pre-trained models is a crucial factor, both for developers and for the companies applying these models.

”

Biography

Peter Sukosd, Before working as Company Secretary of Auchan Retail Hungary Peter Sukosd worked as Legal, Compliance and Public Affairs Director at eMAG Hungary for nearly four years and he also worked for five years at METRO Cash & Carry Hungary as Head of Legal, Compliance and Public Affairs and as Head of Competition and Antitrust at DLA Piper Hungary from 2019 on. Previously, from 2012, he worked as a senior legal manager at British American Tobacco responsible for Hungary and Croatia. After graduating from university he started working at the Hungarian Competition Authority where he was appointed to be the deputy-director of the Antitrust Directorate from 2012 on. As for his international work experience, from 2007 to 2009, he was working as a policy analyst for the Competition Division of OECD in Paris and from 2005 to 2006 as a national expert for the European Commission, DG Competition. He is completing his Ph.D. studies at University of Pécs, Department of Law, International and European Law Section, where his main research areas are the assessment of buyer power issues, extraterritorial application of EU competition law, future chances of an international antitrust code and the analysis of existing bilateral and multilateral competition agreements.

Abel Kaszian

Group Data Protection Officer

“

As Hungary finalizes its national AI governance structure, forward-thinking businesses are actively aligning with the EU AI Act's effective rules by building AI inventories, vetting vendors, and conducting essential AI literacy and awareness trainings.

”

Biography

Abel Kaszian is the Group Data Protection Officer for Wizz Air, with a core emphasis on data privacy. As a key stakeholder, he is an integral part of the group's AI governance framework, focusing on implementing business-friendly solutions while upholding robust compliance standards.

AI & Partners

Amsterdam - London - Singapore

Miklos Zorkoczy

Legalise Hungary

“

Hungary's Ai Ecosystem connects classrooms and capital: the Hungarian StartupUniversity Program (HSUP) supports students to learn and understand how to startup projects like developing or implementing Ai solutions. The National Research and Development Office (NKFIH) supports innovative Ai solutions of universities in cooperation with business entities.

”

Biography

Abel Kaszian

- Medical law specialist
- Consultant of Ai innovations and legal compliance
- Teaching „LegalTech in practice” full semester course at university level
- Researcher of the topic: 'Ai and HealthTech'
- Start up mentor (HSUP)

AI & Partners

Dr. András Csenterics

PwC

“

I see three key trends shaping the Hungarian AI market. First, the forthcoming regulatory authority under the AI Act will ensure that compliance remains at the forefront of AI development and deployment. Second, AI is making technology projects increasingly complex, requiring a deep understanding not only of the regulatory framework, but also of data governance, cybersecurity, business strategy, and ethical considerations. Third, the streamlining of business operations through AI and the pursuit of its benefits will remain a central goal for any market-driven organization.

”

Biography

Dr. András Csenterics is an attorney-at-law and partner at PwC Legal Hungary, with a core focus on technology law, data privacy, and AI regulation. He advises both Hungarian and international clients on the legal deployment of AI systems, the design of AI governance frameworks, and strategies to promote AI literacy across organizations. Leveraging his experience in the GDPR, NIS2, and the EU AI Act, as well as his background in M&A transactions, András's priority is to deliver practical, business-oriented legal solutions that align with clients' operational realities. András is a frequent speaker at industry events focused on emerging technologies, data protection, and digital transformat

Kőteleky Aywee

*Co-founder &
Creative Director*

“

If everything arrives late and is over-regulated in Hungary, it holds back truly innovative SMEs and startups. We shouldn't fear AI taking jobs; we should give it room to create new ones.

”

Biography

Kőteleky Aywee, in recent years, I've specialised in integrating Generative AI into the creative process, combining my expertise in art direction and campaign design with AI's limitless creative potential. This approach allows me to craft bold, innovative work – from concept to final execution – faster and with greater creative range than ever before. At BOOM – THE AiGENCY, I work with my co-founders to combine the capabilities of AI with our deep professional experience to deliver faster, easier, and more comprehensive creative communication solutions to our clients. We pioneer a new model for advertising and film – built on Ai intelligence and decades of human creative expertise.

Important notice

This document has been prepared by AI & Partners B.V. for the sole purpose of enabling the parties to whom it is addressed to evaluate the capabilities of AI & Partners B.V. to supply the proposed services.

Other than as stated below, this document and its contents are confidential and prepared solely for your information, and may not be reproduced, redistributed or passed on to any other person in whole or in part. If this document contains details of an arrangement that could result in a tax or National Insurance saving, no such conditions of confidentiality apply to the details of that arrangement (for example, for the purpose of discussion with tax authorities). No other party is entitled to rely on this document for any purpose whatsoever and we accept no liability to any other party who is shown or obtains access to this document.

This document is not an offer and is not intended to be contractually binding. Should this proposal be acceptable to you, and following the conclusion of our internal acceptance procedures, we would be pleased to discuss terms and conditions with you prior to our appointment. Images used throughout the document have either been produced in-house or sourced from publicly available sources (see **References** for details).

AI & Partners B.V. is the Dutch headquarters of AI & Partners, a global professional services firm. Please see <https://www.ai-and-partners.com/> to learn more about us.
