Concentration of Generative AI Innovation in Core EU Economies Highlights Need for Accelerated Ecosystem Development in Emerging Member States to Sustain Europe's Competitive Edge

appliedAI Instiute for Europe: Generative AI Startups – Geographical Distribution in the EU (February 2024)

Generative AI startup activity within the European Union is heavily concentrated in a few advanced economies. Germany (19.9%), France (17.5%), and the Netherlands (10.9%) together account for nearly half of all EU-based generative AI ventures. This geographic clustering reflects strong R&D ecosystems, deep capital markets, and robust industrial AI demand. Northern economies such as Sweden (8.2%) and Finland (4.2%) also perform well relative to their size, leveraging mature digital infrastructures and supportive policy environments.

However, the lower representation in Southern and Eastern Europe—most notably Romania (1.0%), Bulgaria (0.9%), and Hungary (0.4%)—reveals an uneven innovation landscape that risks widening the EU's internal digital divide. Structural barriers such as limited access to venture funding, weaker university–industry linkages, and regulatory uncertainty are constraining startup formation.

To unlock balanced growth, policy and industry leaders should focus on three priorities: first, **accelerate cross-border funding mechanisms** that connect capital-rich hubs with emerging ecosystems; second, **build pan-European AI testbeds** to democratize infrastructure access; and third, **strengthen skills mobility** through EU-wide AI fellowships and research exchange programs.

Who Are We

AI That You Can Trust

Why Us?

Stay on the right side of history. At AI & Partners, we believe AI should unlock potential—not cause harm. We've seen the fear and fallout when teams lose control of AI, but also the trust and innovation that follow when it's handled responsibly. That's why we exist: to help you build AI you can trust and stand behind—for the long run.

80%

of AI systems
are unknown

What Do We Do?

We enable safe AI usage—for your organization and your clients. Unknown AI adoption leads to confusion, risk, and reputational damage. We help you take control with tools to identify, monitor, and govern all AI systems—so you're not reacting to AI, you're leading it.

How Do We Do It?

Do you know what AI systems you have? Identify all known and unknown AI systems (algorithms, LLMs, prompts, and models) from all internal and external AI vendors, automated by generating your inventory. Overall, 80% of AI inventory is unknown to our clients.

How do you guarantee ongoing safe AI use? Continuously monitor deployed AI systems for performance drift, anomalies or failures, real-world impacts, and emerging risks (e.g. data poisoning). Any malfunction of an AI system has severe implications for organisations (e.g. inability to assess online misinformation that leads to widespread public mistrust), so monitoring becomes a matter of urgency.

AI Discovery & AI Inventory

Automatically detect all AI systems, including models, algorithms, and prompts, and maintain a live, always-updated register for full visibility and compliance.

Responsible AI

Embed fairness, transparency, and control into every stage of AI use—aligning with the EU AI Act and building 'Trustworthy-by-Design'.

Model Monitoring

Continuously track your AI models after deployment to detect drift, bias, or failure—so you stay in control and prevent harm before it happens.
