Korea's AI provider landscape is emerging, with initial growth since late 2024. Strategic partnerships and targeted investment can accelerate domestic capabilities and global competitiveness.

OECD.AI: Number of Model Providers by Country (Oct-2025)

Korea has recently entered the AI provider market, with the first recorded providers appearing in September 2024. Since then, the country has maintained a steady count of one provider per month through April 2025. While the absolute numbers are small, this represents the beginning of Korea's strategic positioning in the global AI ecosystem. Early entrants suggest a high potential for growth if supported by regulatory alignment, investment incentives, and talent development initiatives.

From an extraterritorial perspective, Korea's engagement in AI development may have outsized influence despite limited domestic scale. Many AI applications developed in Korea will likely be integrated into multinational platforms or exported to markets such as the United States, Europe, and Southeast Asia. Consequently, Korean providers could be subject to compliance requirements under the EU AI Act, U.S. regulations, and emerging Asian governance frameworks, which will shape their design, deployment, and risk management practices. Furthermore, partnerships with global providers can accelerate technology transfer, enhance market reach, and influence standards-setting processes internationally.

For stakeholders, the implication is clear: early engagement in Korea's AI sector offers opportunities to influence nascent capabilities, establish regulatory-compliant development practices, and participate in cross-border collaborations. Without proactive investment, Korea risks lagging in provider scale, limiting both domestic innovation and its ability to shape global AI norms.

Who Are We

AI That You Can Trust

Why Us?

Stay on the right side of history. At AI & Partners, we believe AI should unlock potential—not cause harm. We've seen the fear and fallout when teams lose control of AI, but also the trust and innovation that follow when it's handled responsibly. That's why we exist: to help you build AI you can trust and stand behind—for the long run.

80%

of AI systems
are unknown

What Do We Do?

We enable safe AI usage—for your organization and your clients. Unknown AI adoption leads to confusion, risk, and reputational damage. We help you take control with tools to identify, monitor, and govern all AI systems—so you're not reacting to AI, you're leading it.

How Do We Do It?

Do you know what AI systems you have? Identify all known and unknown AI systems (algorithms, LLMs, prompts, and models) from all internal and external AI vendors, automated by generating your inventory. Overall, 80% of AI inventory is unknown to our clients.

How do you guarantee ongoing safe AI use? Continuously monitor deployed AI systems for performance drift, anomalies or failures, real-world impacts, and emerging risks (e.g. data poisoning). Any malfunction of an AI system has severe implications for organisations (e.g. inability to assess online misinformation that leads to widespread public mistrust), so monitoring becomes a matter of urgency.

AI Discovery & AI Inventory

Automatically detect all AI systems, including models, algorithms, and prompts, and maintain a live, always-updated register for full visibility and compliance.

Responsible AI

Embed fairness, transparency, and control into every stage of AI use—aligning with the EU AI Act and building 'Trustworthy-by-Design'.

Model Monitoring

Continuously track your AI models after deployment to detect drift, bias, or failure—so you stay in control and prevent harm before it happens.
